Sub: Statement of Purpose for my Student Visa Application
Dear Sir/Madam

I, Jashanbeer Kaur, am writing this letter to support my student visa application, through which I am applying to study Associate of Science degree in Biology for which I need a study visa.

My previous application was rejected for the following reasons:

- The purpose of your visit to Canada is not consistent with a temporary stay given the details you have provided.

I wish to furnish some explanations through this letter of explanation regarding my future intentions.

Academic and Professional Background

My school life had been very grateful to me as I learned the most important things there only. I discovered a fascination inside me to delve into the scientific world. Throwing some light on my academic history, I finished grade 10 from ICSE board in 2017 with 69% marks and grade 12 in medical stream from CBSE board in 2019 where I studied physics, chemistry and biology and scored 68% marks respectively. Subsequently, I have gained some experience by working as a Trainee at Grover Clinic from 1st November 2020 to 30th March 2021. I have given the IELTS test and my overall score is 6.5 bands with individual scores of 7 in Listening, 7 in Reading, 6 in Writing and 6.5 in Speaking.

Reason to do Associate of Science Degree - Biology

With the ongoing pandemic, we all have witnessed the importance of health and medicine. The way humans are using life science and intensive research to save millions of people are fabulous and mesmerizing. Such practices are growing day by day parallel to the demand for healthy lifestyles and medicines. I intend to become a part of this burgeoning community to serve the souls of our planet. Therefore, I decided to pursue an associate of science degree in biology. Through this lab-focused curriculum course, I will be able to conduct experiments, demonstrate laboratory techniques, generate hypotheses and explore the biological concepts of the living organisms present on earth.

Benefits of doing the course in Canada

When it comes to choosing a destination for studies, I will always choose a country in which education and degree are acknowledged internationally. Canada tops that list in my thesis. The pedagogy system is continuously evaluated and graded by international organizations to adhere to the standards established. The country has a leading research infrastructure, thus it allures infinite students to dream about studying in Canada. The country renders standardized training in various fields, especially in science and technology at a reasonable cost. I was amazed with the educational prospects of Canada and thus, I decided to pursue associate degree in this country only.

Why choose Capilano University?

No doubt, that the country is full of internationally recognized universities and Capilano University is one of them. The university is rendering degrees in biology for the past 40 years with excellence at par. The university has required infrastructure such as biological and analytical laboratories where students can gain hands-on experience and practical knowledge. The university also administers professional experience opportunities which is what I always seek. Moreover, another prime factor which convinced me to study at this university was the lab-focused curriculum where we will be taught all the theories through lab experiences and experiments for which I am the most excited.

Financial Resources

My family consists of my parents, grandparents and my two brothers. Both of my father and mother are working and file ITR of INR 2,64,540 and INR 4,97,540 respectively. My family owns movable property worth INR 18,31,535 and immovable property worth 20,00,000. Thus, my family is financially stable enough to sponsor my education in Canada. I have successfully paid the first year tuition fees of _____ and GIC of 10,000 CAD.

Refusal Reason Explanation

My previous application was refused on grounds of my intentions of not returning back to India after the course ends. I wish to clarify that my sole purpose of staying in Canada for for two years is to gain extensive knowledge in biology and as soon as the course ends, I will be moving back to India. I wants to work towards the advancement of healthcare sector in India and thus, my plans are to go back. Moreover, I have been raised in a big family, remained always in hustle and bustle. Thus, I can't even think of doing job anywhere in India except in my hometown. Thinking about pursuing

employment in Canada and getting settled here is too far. I wish to flourish in my career while living with my parents and grandparents.

Career progression after my course

Soon this course ends, I will be moving back to India as India is in major need of healthcare professionals and biologists. I wish to serve the people of India and thus, increase the access of latest developments in biology and life sciences to my country. Through this program, I want to enter the rapidly growing global biology sector. I want to become one of those people who can meet the demand for highly experienced biologists in the domains of medicine and healthcare. The positions at which I can work are Medical Assistant, Biological Technician, Research Assistant, Food Science Technician, etc. Moreover, this degree will also provide me a stepping stone to further studies in the highly dynamic domains of nursing, health science, biology, biotechnology, etc. I know this course obliges a lot of perseverance and diligence and I am ready to shower all of them. I firmly believe that this course will expand my career options for me for a bright future. I can assure you that my endeavors will never fall short. Every minute, my dedication will increase to achieve what I desire. I hope the authorities will acknowledge my interests and aspirations worthy of a study permit to Canada.

Sincerely,
Jashanbeer Kaur
